

FOR PERSONAL INJURY · MEDICAL MALPRACTICE

Let your evidence speak for itself.

3D anatomical models built from your client's actual MRI and CT scans — making complex injuries undeniable to juries, judges, and opposing counsel.

Stop telling juries about the injury. Show them.

01

Real evidence, not illustration.

Every model is built from your client's own scans — admissible, defensible, undeniable.

02

Juries get it. Instantly.

Complex injuries become obvious. No medical degree required to understand them.

03

Three formats, one source of truth.

Stills for demand letters. Video for opening. Interactive models for the courtroom.

"3D imaging significantly improves juror comprehension of complex medical evidence in courtroom settings."

— PEER-REVIEWED RESEARCH

Real anatomy. Real evidence.

Send us your case file for a complimentary preview rendering — no obligation.
